The ¢ÂÃÂExport PDUs to File¢ÃÂ¦Â¢ÂÃÂ¢ÂÃÂ Dialog Box The ¢ÂÃÂExport PDUs to File¢ÃÂ¦Â¢ÂÃÂ¢ÂÃÂ dialog box allows you to filter the captured Protocol Data Units (PDUs) and export them into the file. It allows you to export reassembled PDUs avoiding lower layers such as HTTP without TCP, and decrypted PDUs without the lower protocols such as HTTP without TLS and TCP. In the main menu select ¢ÂÃÂ . Wireshark will open a corresponding dialog Figure 5.13, ¢ÂÃÂExport PDUs to File window¢ÃÂÂ. Figure 5.13. Export PDUs to File window To select the data according to your needs, optionally type a filter value into the Display Filter field. For more information about filter syntax, see the Wireshark Filters man page. In the field below the Display Filter field you can choose the level from which you want to export the PDUs to the file. There are seven levels: DLT User. You can export a protocol, which is framed in the user data link type table without the need to reconfigure the DLT user table. For more information, see the How to Dissect Anything page. DVB-CI. You can use it for the Digital Video Broadcasting (DVB) protocol. Logcat and Logcat Text. You can use them for the Android logs. OSI layer 3. You can use it to export PDUs encapsulated in the IPSec or SCTP protocols. OSI layer 4. You can use it to export PDUs encapsulated in the TCP or UDP protocols. OSI layer 7.
